

Amanuel Behailu

Addis Ababa, Ethiopia | Backend Developer
GitHub: github.com/Amandecoe

Professional Summary

Computer Science student with practical experience building backend systems using Python, Django, and PostgreSQL. Interested in backend engineering, authentication systems, and scalable web applications. Currently developing personal projects focused on backend architecture, database management, and user authentication while continuing to strengthen software engineering skills.

Technical Skills

Languages: Python, JavaScript, Java, C#, C++, PHP, HTML, CSS

Frameworks & Technologies: Django, REST APIs, PostgreSQL

Tools: Git, GitHub, VS Code, PyCharm

Concepts: Object-Oriented Programming, Backend Development, Authentication Systems

Projects

AuthForge — Authentication System (Ongoing)

- Building a reusable authentication system using Django and PostgreSQL.
- Implemented user registration, login, and authentication functionality.
- Working with backend APIs, activity tracking, and authentication flows.
- Focused on clean backend structure and scalable application design.

E-Commerce Backend Application

- Developed a backend-only e-commerce application using Django.
- Designed database models for products, users, and orders using PostgreSQL.
- Implemented backend logic and organized the project using Django best practices.

Personal Portfolio Website

- Created a responsive personal website using HTML, CSS, and JavaScript.
- Built the interface from scratch to improve frontend and UI fundamentals.

Education

St. Mary's University — Addis Ababa, Ethiopia

Bachelor of Science in Computer Science

Expected Graduation: 2027

Additional Information

- Actively learning backend development and software engineering practices.
- Interested in internship and junior backend developer opportunities.
- Comfortable using Git and GitHub for project version control.
